The first release of AutoCAD, R16, and the first release of AutoCAD LT, R10, were both licensed and sold by Siebel Systems. AutoCAD was originally designed by Arthur Nielsen and Avi Cohen. AutoCAD R16 introduced the "ribbon" toolbar, a graphical user interface (GUI) consisting of a horizontal line with icons at its right edge. This ribbon interface would become the basis for the GUI interface of most subsequent AutoCAD releases. The ribbon interface, accompanied by the drop-down menus, was adopted by other software applications, including Microsoft Word, Outlook, and Microsoft Excel. In 1983, Siebel Systems was bought by Novell and their products were rebranded as Novell products. Novell wanted to focus on the development of software for Unix operating systems. Siebel Interactive Systems was restructured and sold to Apollo Computer. Apollo renamed the product AutoCAD, and as a result of the Siebel acquisition, the product contained licensed "Siebel" software. Apollo, a company founded by a group of engineers that had been working on a project to develop CAD software for the Apple II, acquired the AutoCAD source code from Siebel and marketed it as their own product. Original AutoCAD The first release of AutoCAD was AutoCAD R16, and it was first available for sale in December 1982. In AutoCAD R16, the design program is in a separate window, called the "document window," from the drawing window. The

user could place the design tool in either window. AutoCAD R16 was an early, highly interactive and user-friendly design program, but also a buggy, unstable, and difficult program to master. The software also had a steep learning curve and was best suited to students of engineering, architecture, and the architectural design professions. The main difference between the two application programs is that AutoCAD can create and edit drawings and models, while AutoCAD LT can only edit drawings. With the purchase of the AutoCAD LT program, Siebel Systems released the first version of AutoCAD LT for sale in April 1985. The AutoCAD LT program introduced the ribbon interface as its default, in order to separate it from the previous version of AutoCAD. The ribbon interface became the standard graphical user interface for most office applications. The ribbon interface introduced new components and new objects, like toolbars, selection
