### What's New In?

The RS RotoThree plugin expands a kind of “flipping” to the piano, where the original sound image remains and the new one exists in the treble (90 to 120 Hz). The plugin makes it easier to create piano sounds with a powerful sound depth and creates a new and unusual sound character. An interesting sound is created by the additional material. The user may distinguish the note edges and obtain a new, fine-grained sound. The general sound formation is comparable to the sound of an acoustic piano. Features: – allows a freely adjustable sound spectrum between 50 Hz and 200 Hz, which includes the additional material – H-S-T for easy sound control of each channel (detection of the relationship to the sound spectrum) – the fundamental note is detected as a reference interval, then the resonance can be adjusted by shifting the sound spectrum – additional material in the treble – up to 5 retriggerable presets – exported to Apple Logic Installation: Unpack the RS RotoThree VST or AAX plugin into your VST plugin folder, then drag the entire folder into your application.
