The invention relates in particular to a device for forming images on wafers from a molecular layer containing electronic components. Several embodiments of such a forming device are known. In order to maintain the sample on the supporting surface of the carrier, for example a wafer, a cover is provided, which can be removed after the forming of the image. A disadvantage of such a device is that the cover requires a certain minimum thickness in order to guarantee a gap between the cover and the substrate. However, even a gap which is so small that the cover can be removed or detached from the substrate may possibly be sufficient to allow the migration of molecules from the sample into the gap. A further problem is that the cover is not inert in some cases, i.e. in its vicinity various chemical compounds are formed, which, especially in the case of photo components such as various photonic

systems, are likely to affect the image. EP 0 576 140 A2 discloses a further device for forming images on wafers, which has a deformable membrane for covering the wafer and a support for the membrane. The support, which is formed as a perfor

Thank you! It's really amazing to see OpenFeint integration in video games!

With all these new consoles, cross platform compatibility will be even more relevant.

And about songs : I really love having access to my saved game when I want (ie. to listen it in a car in the middle of nowhere), especially when I'm on a vacation.

Anyway, for me, it's very important to know if such integrations are still a concern. Do you still need to keep the Japanese version of your game to have access to native songs?

Thank you again and I wish you a lot of success with your future games!
